COMPANY POLICIES

ENVIRONMENTAL POLICY

This is useful that environmental policy comprises two major terms: Environment and policy. Environment refer to the physical ecosystems, but can also take into consideration the social dimension (Quality of life, health) and an economic dimension (Resource management, biodiversity). Policy can be defined as a course of action or principle adopted or proposed by a business. Thus, environmental policy focuses on problems arising from human impact on the environment, which retroacts onto human society by having a (negative) impact on human values such as good health or the clean and green environment.

Environment issues generally addressed by environmental policy include (but are not limited to) air & water pollution, waste management, eco system management, biodiversity production, the protection of natural resource, wildlife and endangered species and the prevention of these natural resource for future generations. Relatively recently, environment policy has also attended to the communication of environment issues.

Environmental Policy refer to the commitment of an organization to the laws, regulations & other policy mechanisms concerning environmental issues and sustainability. These issues generally include air and water pollution, solid waste management, Biodiversity, Ecosystem management, Maintenance of biodiversity, the protection of natural resources, wildlife and endangered species. Policies concerning energy or regulation of toxic substance and many type of industrial waste are part of the topic of environmental policy. This policy can be deliberately taken to direct and oversee human activities and thereby prevent harmful effects on the biophysical environment and natural responses, as well as to make sure that changes in the environment do not have harmful effects on human.

It is commitment of organization to maintain pollution free working atmosphere and compliance of all rules pertaining to working environment.
